##### OPERATION:

Applies a gentle but powerful gust of high-speed, cool or warm air to both sides of the hands. If ambient temperature is higher than 25°C, the unit will stop heating and will keep heating if lower than 25°C. The high-speed air blows the water from a user's hands as they slowly remove them from the dryer opening. This 'dual fast drying' process literally forces water from both the palms and backs of hands in seconds. High and low sensors prevent water drops from reaching the body. It is also less messy than conventional electric hand dryers or paper towels.
